Class curriculum. Are your eyes just glazed? That's what happened when I went to my curriculum class with my students in the first year I taught. I'm sure it was 3 pages in size 12 times the new Roman font. I also remember a disproportionate amount of my first day in class discussing it. Not my best learning moment! Your class program doesn't have to be boring! Here are some ways to get your students informed and interested, and we'll provide you with an edited freebie and/or digital program to get you started. 1. Keep your SYLLABUS simple No more to report. Ask yourself: What does a student (or parent) need to know about your class to be successful? Keep an eye on the basics - your contact information, assessment and late work policy, homework expectations, supply list, class schedule, and class website. As a math teacher, I even printed a large copy of my training schedule and how to ask for help on my back. It was perfect for the parents to put on the fridge. Also, keep it pleasing to the eye. Do you like reading paragraphs of informational text? Use paddocks, text boxes and images to find specific information. 2. Check with the administration and level group of MEMBERS remember that your policies should be in accordance with your school policy. If your school has a certain late-job policy, stick to it. Not sure? Find out. If you are in a class level group, agreeing to the same policies can make it easier for students and parents (and teachers -ha!) to remember. 3. Hold students accountable for knowing information In high school, my algebra 2 teacher got us to take a quiz on her program that counted on the class on the second day of school. While this may work for some students, playing Jeopardy or any simple point of play will be a fun way to start the school year. I split the team room in half, hand out small boards and ask questions. Students should use their curriculum to find answers to questions. Then their homework on the first day to get their program signed by the parent. 4. Posting it online Curriculum can act as a frequently asked question in your class. Keep it in a place where students and parents can access it with ease. Update it if policies or graphs change. As much as I'd like to think that my students have kept my paper version, I know that the program is one of the first things to be recycled when binders fill up. I am also a proponent of being as paper free as possible. You can find our online version (for Google Slides) by grabbing a freebie. We've done different versions, as you can see below. Do you write a curriculum for your class? If you do and needs it to be updated or would like to have one in year, you can snag free, edited training programs. It's easy to enter content, and you just need Google Slides (or Microsoft Powerpoint if you use paper.) paper.) middle school math syllabus template. middle school math syllabus pdf. middle school math syllabus doc. middle school math syllabus example. middle school math syllabus template pdf. middle school math methods syllabus
